

Water

Fresh Water Friends

Summary

Here, we highlight how MDA Engineers is partnering with Fresh Water Friends to drill water wells in India and other countries. These wells provide clean drinking water.

MDA ENGINEERS

Since 1982

Clean Water doesn't always come easy!

MDA Consulting Engineers is supporting efforts to provide clean drinking water to villages in India and other countries. As a Civil Engineering Firm involved in the design and construction of drinking water projects here in the United States, we are particularly interested in helping to support these types of projects overseas. One way we do this is to partner with *Fresh Water Friends*, a public charity that installs deep bedrock wells in underserved villages.

Quick Facts:

- Villagers may walk up to 15 miles each day for a few gallons of water for their families.
- Providing fresh water through a bedrock well cuts the mortality rate among the children in half
- A well gives young girls the time to attend school and receive an education
- Providing a deep well in a Village gives the residents much more time to focus on family, education, and work
- A well can also enable services such as: hygiene, day care, tutoring, literacy development, skills training, and even some medical care
